SOFTPILE™ PANT

Fabric	100% Polyester - single side Softpile™ fabric
Weight	483 g/m ²
Fabric Technology	Thermal, quick-dry
Seam Construction	Flatlock seams

Helly Hansen is the leading supplier of cold weather clothing in Canada. Our garments have protected the outdoor worker for over 25 years. In order to be the leading provider of cold weather workwear, Helly Hansen continually innovates within our core product line. The latest version of Softpile™ is made from 483 g/m², 100% polyester, with a denser knit than previous versions. It offers stronger resistance to fiber compression thereby increasing the long term thermal qualities and durability of the garment.

This product provides the warmth and quality that our customers have been used to since we brought thermal layering to market over 25 years ago. Softpile™ is the Canadian standard in cold weather workwear and works best in conjunction with a baselayer and protective outer layer.

The garment has a better fit and pills even less than previous garments. The finishes are smoother and provide a garment that can be worn for work or pleasure due to better aesthetic features. This includes new Helly branding to ensure that people know you are wearing the best Canadian made thermal layer on the market. Softpile™ is now lighter, while still giving strong protection from the cold.

Helly Hansen Softpile™ will keep you Dry. Warm. Safe. At Work.™

FEATURES
