1/2/3
BASE LAYER

FR COWL

Employee efficiency and safety is a key concern for companies that potentially work around flame or ARC flash. Helly Hansen produces a popular line of flame retardant clothing from the base layer to the protection layer.

Helly Hansen's newest line of protective flame retardant gear is made using Kermel[®] fabric and FR Viscose. Intended as a thermal layer, FR Softpile™ has insulating qualities and provides protection from flame and ARC. Thermal Kermel[®] products use all FR components.

This fabric blend gives employees a thermal insulation that protects against flame and heat. The blend of the material ensures a soft hand and elasticity for freedom of movement. Colour will not wash out over the life of the garment and the fabric will not pill.

Thermal layer products work best when combined with a base layer (bodywear) and a protective outer layer. The combination of these two or three layers will increase the overall flame retardant rating of the worker's outfit. The flame retardant and anti-static properties will help keep employees Dry, Warm and Safe, even in the toughest conditions.

COLOUR: GREY
SIZE: One Size

FEATURES

- 48.5% Kermel[®] / 48.5% FR Viscose/ 3% Beltron
- Non-Flammable, high thermal insulation, thermostability and resistance to most chemicals
- Comfortable FR rib knit around face opening
- Contoured neck to fit under a jacket
- Beltron Antistatic treated

STANDARDS:

- CAN-CGSB 155.20 Sections 6.1.1; 6.1.2.1; 6.1.4
