# LIGHTWEIGHT BODYWEAR

## CREWNECK / POLO ZIP / PANT

<b>Fabric</b>	100% Polypropylene
<b>Weight</b>	130g/m <sup>2</sup>
<b>Fabric Technology</b>	Lifa® Stay Dry Technology™
<b>Seam Construction</b>	Microweld seams on outershell, rivet reinforced stress points

Helly Hansen Workwear is proud to announce the addition of LIFA® Stay Dry Technology™ to the Canadian bodywear product line. This new product now adds a second bodywear layer that can be added to the locker of any worker in any element. The DRY series can be worn in conjunction with polypro WARM layer, or as a stand alone layer during warmer weather.

Comprised of the driest fiber on earth, LIFA® grabs moisture away from the skin with Lifa® Stay Dry Technology™ to keep the body warm and dry for all-season work. Low bulk cuffs and flat lock stitching reduces chaffing and eases movement for longer days outside.

Helly Hansen® Dry™ your second skin and the heart of our effective 3-Layer System™. It is a moisture super highway creating a dry layer next to the skin, keeping you comfortable during highly aerobic activities in a wide range of conditions.
